Successful EVAR for a huge infra-renal AAA with inverted 3 neck and tortuous iliac arteries.

Magdy Haggag, MD. Professor of vascular and endovascular surgery, Cairo University, Egypt.

Challenging problems:
- Tortuous or inverted 3 neck.
- Tortuous iliac arteries.
- Short device (Cook, Flex)

Case History:
65-year-old male patient with AAA presented with back pain and abdominal pulsating mass.
Past history of CABG and EF = 38% and normal kidney functions.

A lot of EVAR outside IFU are met. Data are not enough and more information are mandatory, otherwise, IFU criteria should be revised.
